

## Jackdaw news

Well it has been some week for Jackdaws.

It started with a trip to the Castle Museum where the class got to explore Anglo Saxon and Viking life. They made some wonderful broaches that would have been worn by the wealthier. They told stories around a roaring fire and learnt how archaeologists learn about the past from the objects they discover.

In swimming, the children have now all been assessed and certificates will be handed out shortly. The last two sessions will be fun activities including a version of quiditch though alas there will be no flying broomsticks. Once more can I say just how impressed and proud I've been of the class and I know they're all looking forward to these last sessions.

### Science day

Science day was a resounding success. Thanks to all those who could make it to our café where we challenged our engineering and budgeting minds by create an effective and cost efficient device to safely transport a raw egg. We went on to think about design and engineering by building paper airplanes and helicopters. We ended with a rather raucous assembly exploring the science of eggs in physics, biology and chemistry.

Plans are already underway for our next one.

### Next week

### Book Sale

Just a reminder that there is a book sale on Friday afternoon.
